

Makita DPC7311

The Makita DPC7311 14" power cutter offers a fresh new design that enhances performance and provides greater operator comfort. This 73cc power pack is loaded with new technological innovations such as the microchip controlled carburetor that compensates engine timing to work load. The new and improved 5-stage air filtration system has been enlarged by 80% to ensure cleaner air for better performance, even in the dustiest conditions. Better filtration means less down time for maintenance and more production time. Makita also beefed up the aluminum blade guard with pressure plates for reduced vibration and wear. The DPC7311 is equipped with a spring tensioned belt adjustment w/gauge to always ensure proper belt tensioning. Compression release, single knob access to primary air filter and spark plug and a 2-mass dampening system for reduced vibrations makes this the industry leader when it comes to Power Cut saws. You expect the best from Makita - and you get it.

Includes:

- 14" Cut-off wheel
- Diamond Blade on Picture is Optional
- Universal wrench
- Torx wrench
- Screwdriver
- Adaptor Ring (22 mm to 1")

Specifications

- 4.5 cu.in. Displacement Engine
- 5.6 HP Max. Power
- 9,350 No Load RPM
- 50:1 Fuel mixture
- 37 oz. Fuel tank capacity
- 4,300 Max. Spindle speed
- 14" Wheel diameter
- 1" Arbor (w/adaptor)
- 4-13/16" Max. Cutting depth
